## ***Collecting and submitting samples***

### **Location**

Take the following steps into consideration when collecting leaf samples:

- Avoid the outer rows of the greenhouse or field and the first and last 10 yards of a row.
- Sample leaves of average leaf quality.
- Sample abnormal plants (with deficiency symptoms) separately. If a deficiency might be present in the young or old leaves of the total crop, sample these leaves separately as a young or old leaf sample.
- Keep in mind the sunny and shady side of the plant. Always consistently sample the same side.

### **Time of sampling**

It is strongly recommended to take the samples before 9:00 AM. The plant will then have enough leaf-tension with proper moisture conditions.

### **Plant parts**

For a young leaf sample, pick the **youngest, fully developed leaves**. For grape this will be the 4<sup>th</sup> or 5<sup>th</sup> leaf from the top of the vine. Also pick (separately) the **oldest, but still vital leaves** at the lower part of the vine, see picture 1.

Remove the petioles from the leaf. These can have a significant effect on the analysis of the leaf sample. For the analysis you will have a separate young leaf sample and an old leaf sample.

### **Moisture on the sample**

When leaves are wet on the outside due to dew or rain, they can be dried with a tissue. Leaves have to be dry from the outside to be analyzed because water will have an influence on the results. Moreover, the leaves will spoil faster if there is water in the sample bag.

**Pic. 1**

### **Sample size**

For an average, representative sample about 30 leaves are needed, at least 150 grams. Sample size can vary, depending on leaf type (size and thickness). If you have questions about sample size, please contact us.

### Stacking the leaves

To ensure proper processing of the samples, it is important to prepare the samples properly. Stack the leaves as shown below (see pictures below).

### Packing the leaves

Pack the young and old leaf samples separately. Put them in the plastic zip-bag. Push out the air inside and close the bag. Put a pre-printed label on the sample bag and fill in the needed information. Make sure the barcode is visible (see pictures below).

### Fruit samples

To avoid problems at the border and customs, please do not send us fruit samples. The whole sample package, including your leaf and/or water samples will be put on hold.

### Packing the samples

Put all samples in the envelope or a box and make sure it fits in a mailbox (max. 1.38 inches high).

### Sending the samples

The sample zip-lock bags with barcode can be sent in the envelope. If you want to send more than one sample, send together in 1 box. Be sure to put sufficient postage on the envelope or package. Always check the weight. Be sure that envelopes are sealed well. You can put extra tape over the closure to avoid opening during transportation.

Please send samples to the address below:
